Navigation Bulletin No. 2 of 2014

16 June 2014

SPECIAL NOTICE

The elevations of dikes and other stone structures in the Memphis District shown below are **APPROXIMATE**. They are referenced to the nearest local gage based on low water slope (using the 2007 LWRP) between gage and structure locations. Actual elevations of dikes/structures may vary a few feet at the structure due to changes in river conditions and variations in river slopes at higher river stages and during rapidly changing river stages.

Pile clumps 200 to 300 feet apart extend above the dike elevations on many stone dikes.

For safety and prevention of damage to the dikes, navigators should not navigate over dikes at any stages. At all stages, drift is apt to lodge against the dikes and make navigation over them hazardous. Passage over this drift may cause damage to vessels and the dike, without the vessel actually striking the dikes. The dikes/stone structures could do severe damage to pleasure craft, towboats, and barges in the event of collision/allision.

Maps of the dike field and navigable channel are attached as prepared by the River Engineering Section of the Hydraulics and Hydrology Branch.

Locations and approximate elevations of the dikes are as follows:

Updated through 16 Jun 2014
 Based on 2007 LWRP

Dike Field Location	Map No.	Mile	Approximate Elevations Referred to Local Gage			Type
			Main Dike	Terminal Dike	Gage

Approximate elevations for these structures can be found on the Vicksburg District Dike Chart located at <http://www.mvk.usace.army.mil/Missions/OperationsDivision/RiverOperations.aspx>

SPECIAL NOTICE

For the information and guidance of all navigation interests, the following is quoted from the Navigation Regulations Governing the Use of Navigable Waters of the United States, Code of Federal Regulations, Title 33, Part 207, Navigation Regulations:

"207.200 Mississippi River below mouth of Ohio River, including South and Southwest Passes; use, administration, and navigation.

(a) *Mississippi River bank protection works provided by United States.* Except in case of great emergency, no vessel or craft shall anchor over revetted banks of the river, and no floating plant other than launches and similar small craft shall land against banks protected by revetment except at regular commercial landings. In all cases, every precaution to avoid damage to the revetment works shall be exercised. The construction of log rafts along matted or paved banks or the tying up and landing of log rafts against such banks shall be performed in such a manner as to cause no damage to the mattress work or bank paving. Generally, mattress work extends out into the river 600 feet from the low water line. Information as to the location of revetted areas may be obtained from, and will be published from time to time by the District Engineers, Corps of Engineers, New Orleans, Louisiana, Vicksburg, Mississippi, and Memphis, Tennessee, and the President, Mississippi River Commission, Vicksburg, Mississippi."

The following are the locations of effective revetments in the Memphis District:

<u>Revetment</u>	<u>Miles</u>
	<u>Ohio River</u>
Cache-Cairo IL	975.5 - 981.1 R
	<u>Mississippi River</u>
	<u>Above Head of Passes</u>
Wickliffe KY	954.1 - 951.2 L
Mayfield Creek KY	950.6 - 949.0 L

Survey Information

The information depicted on these maps represent the results of surveys made on the dates indicated and can only be considered as indicating the general conditions existing at the time.

Projection Information

Projection Coordinate System:
NAD_1983_UTM_Zone_15 and Zone_16
Projection: Transverse_Mercator
Linear Unit: Foot_US

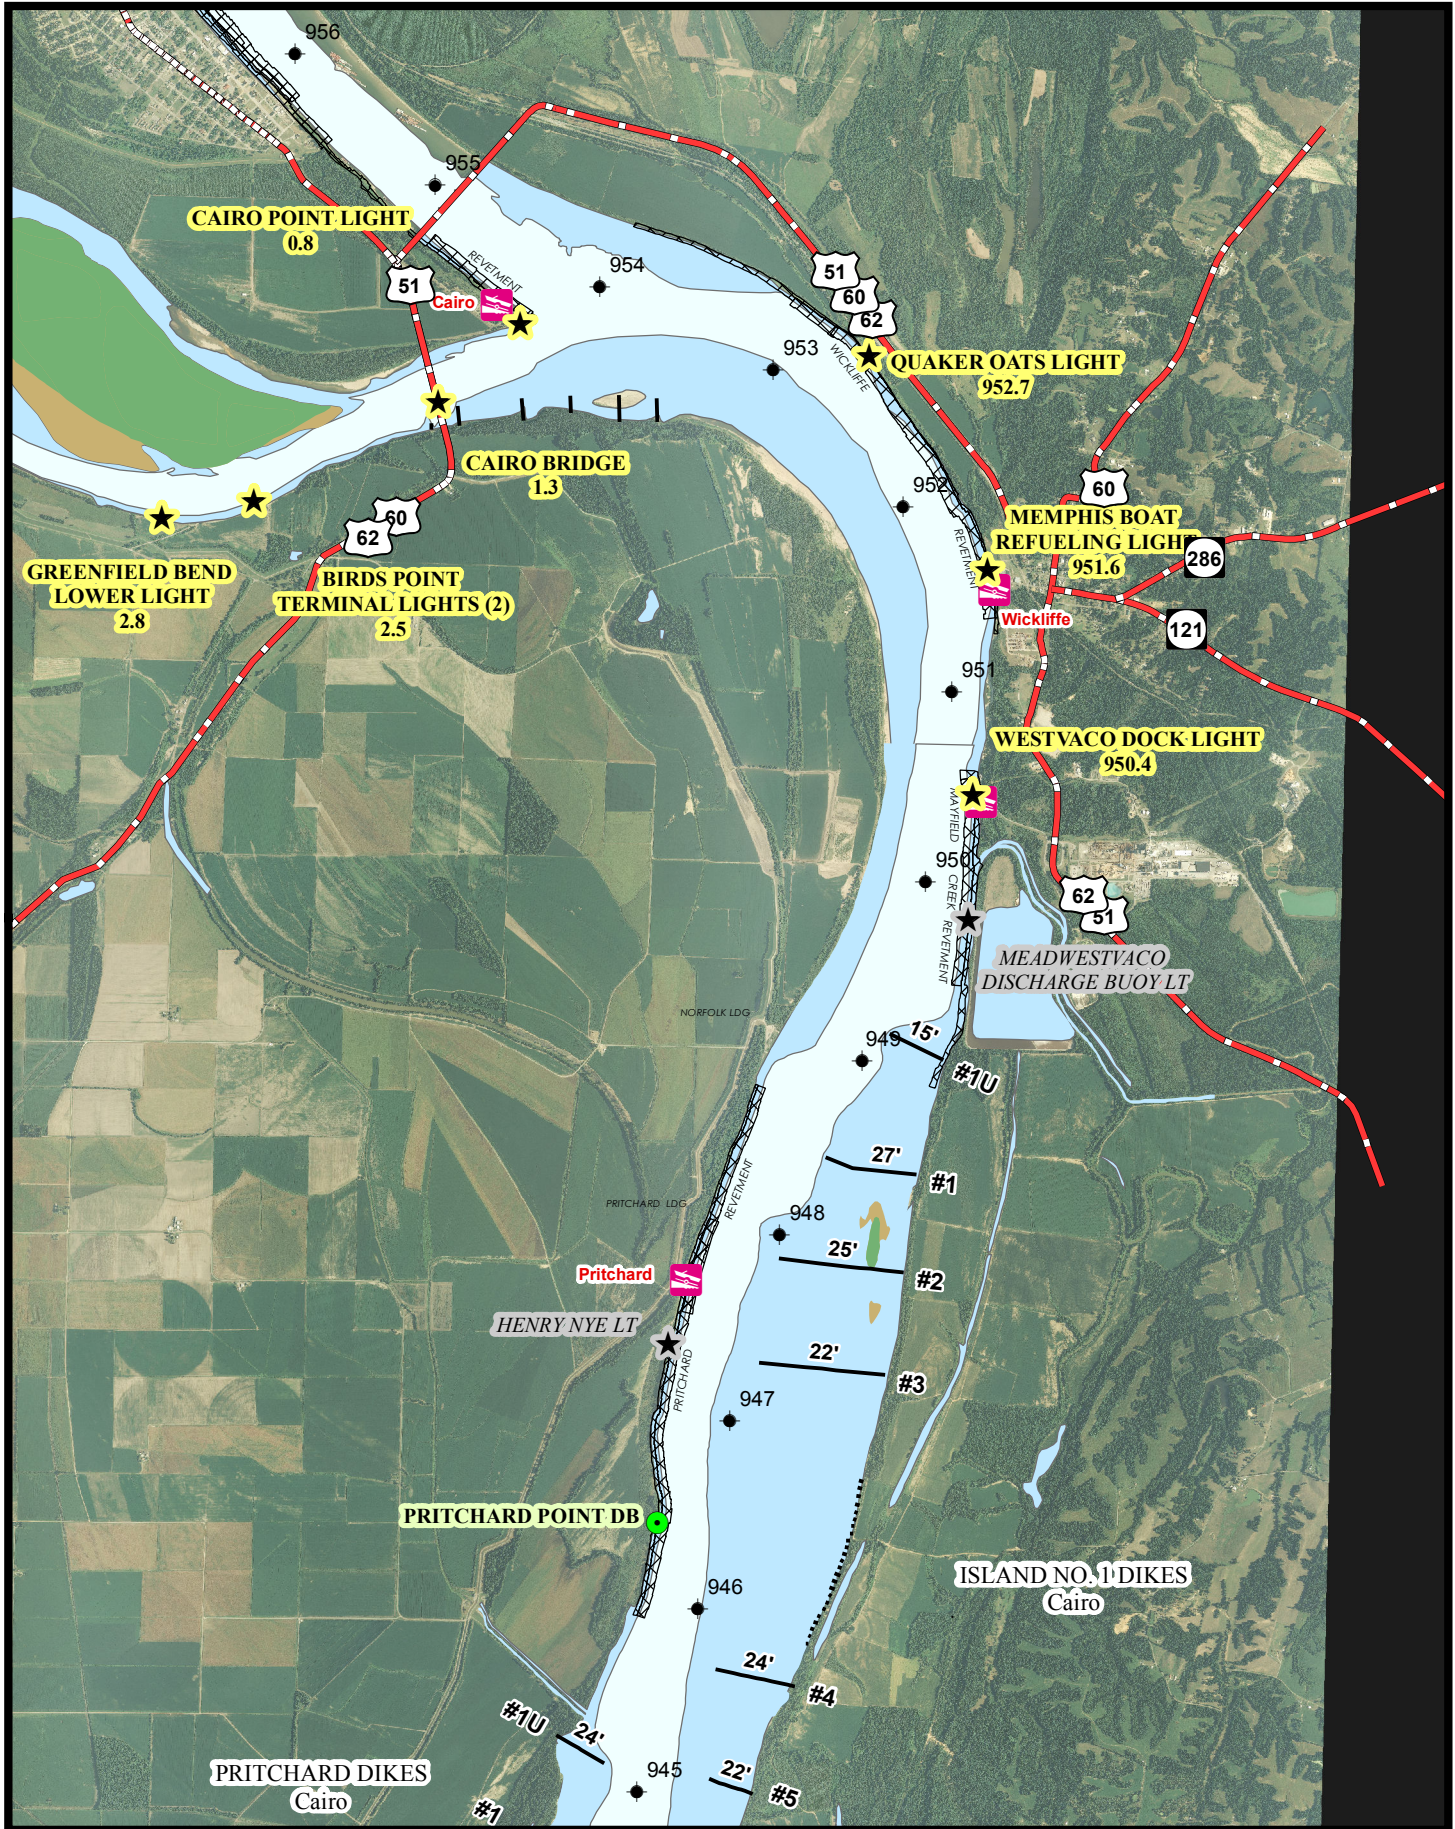

Scale

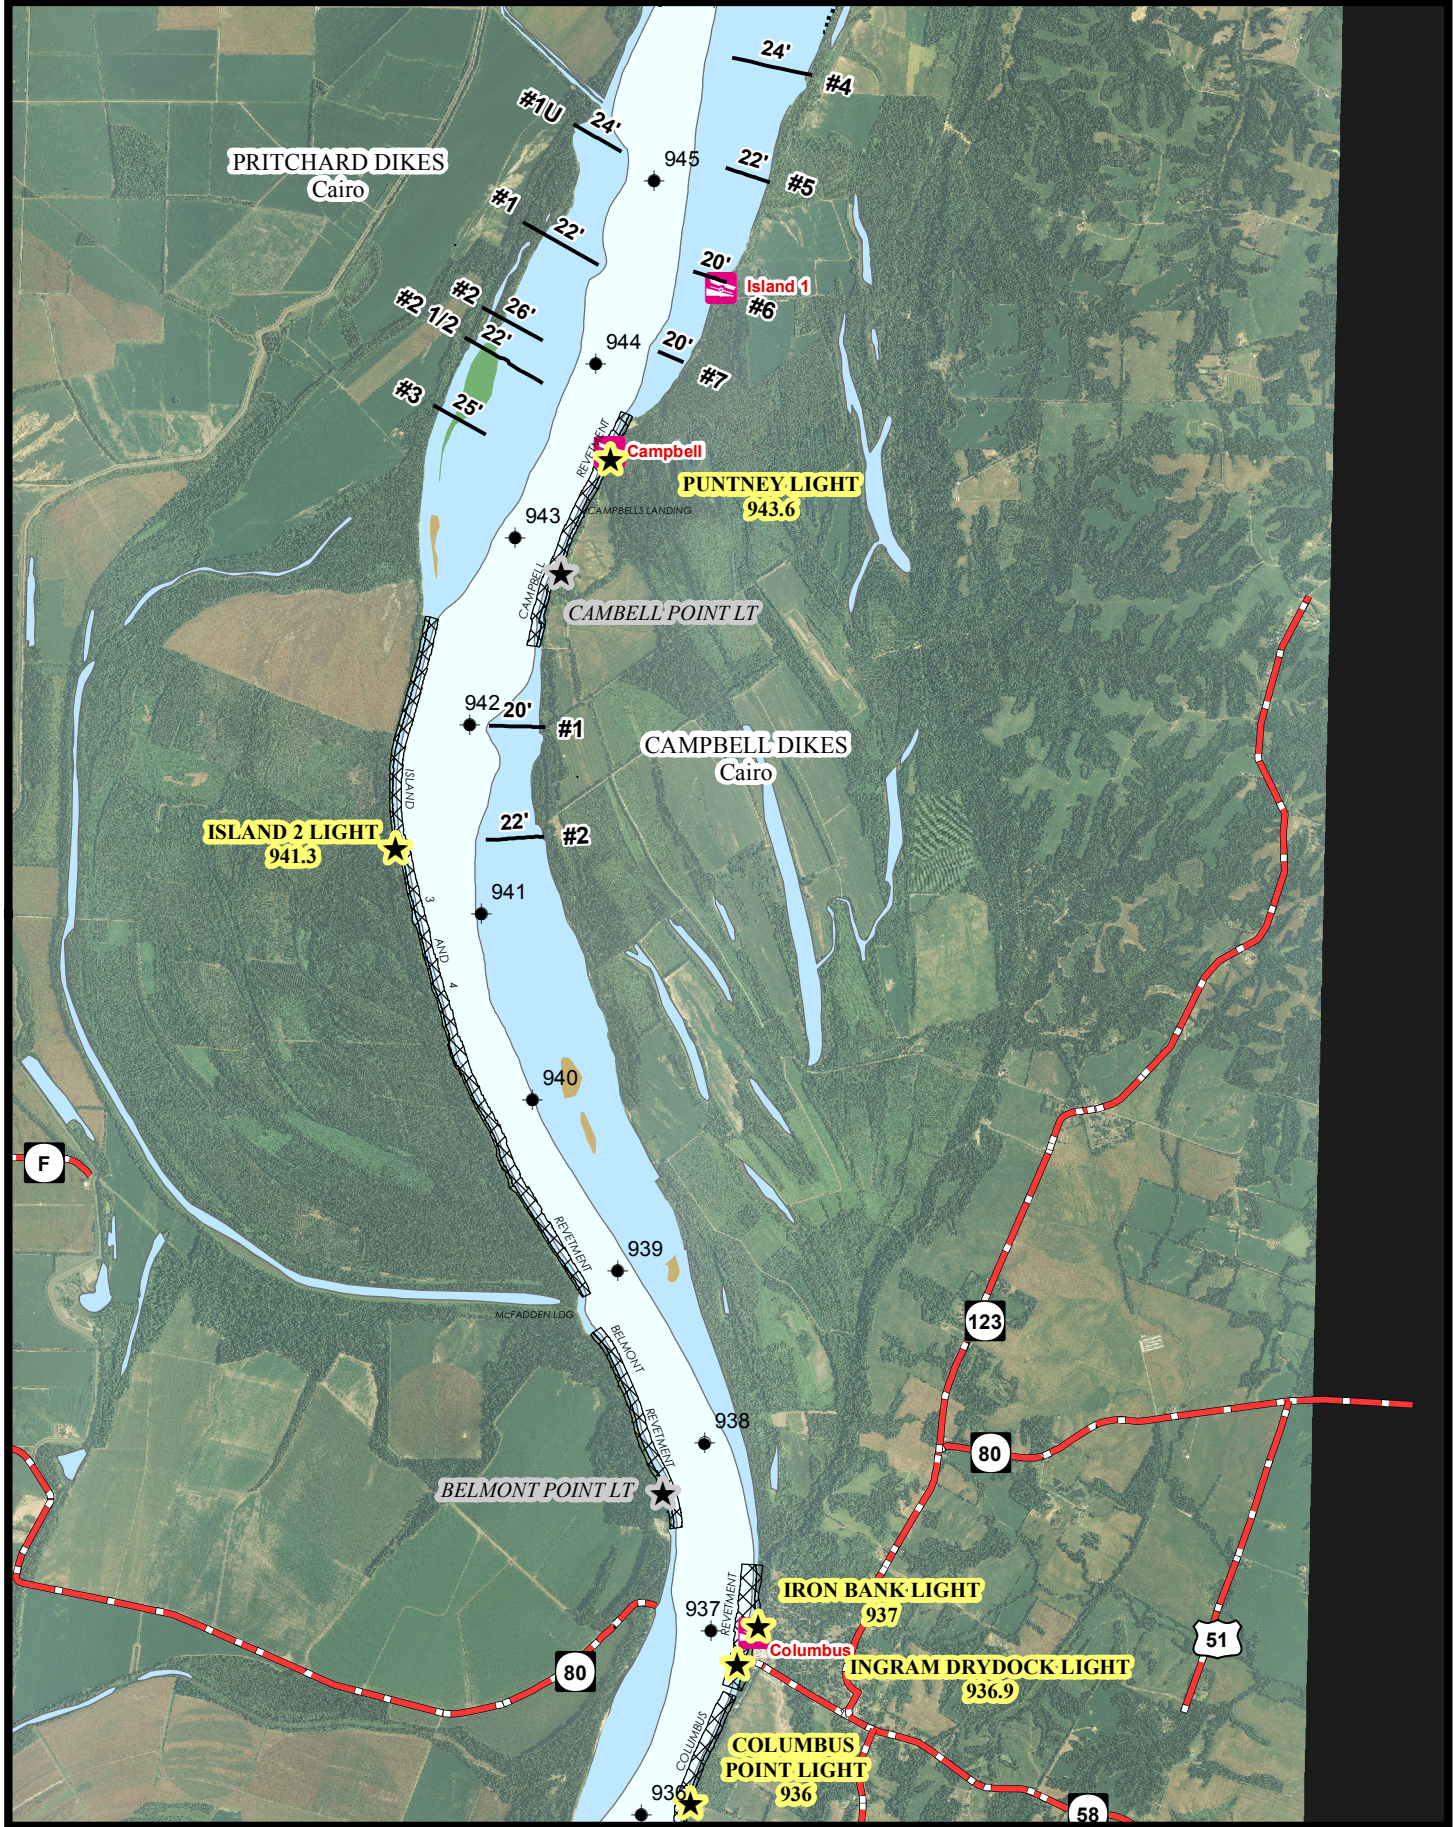

Mapping Scale - 1:63,360
Equivalent Scale - 1 inch = 5,280 feet

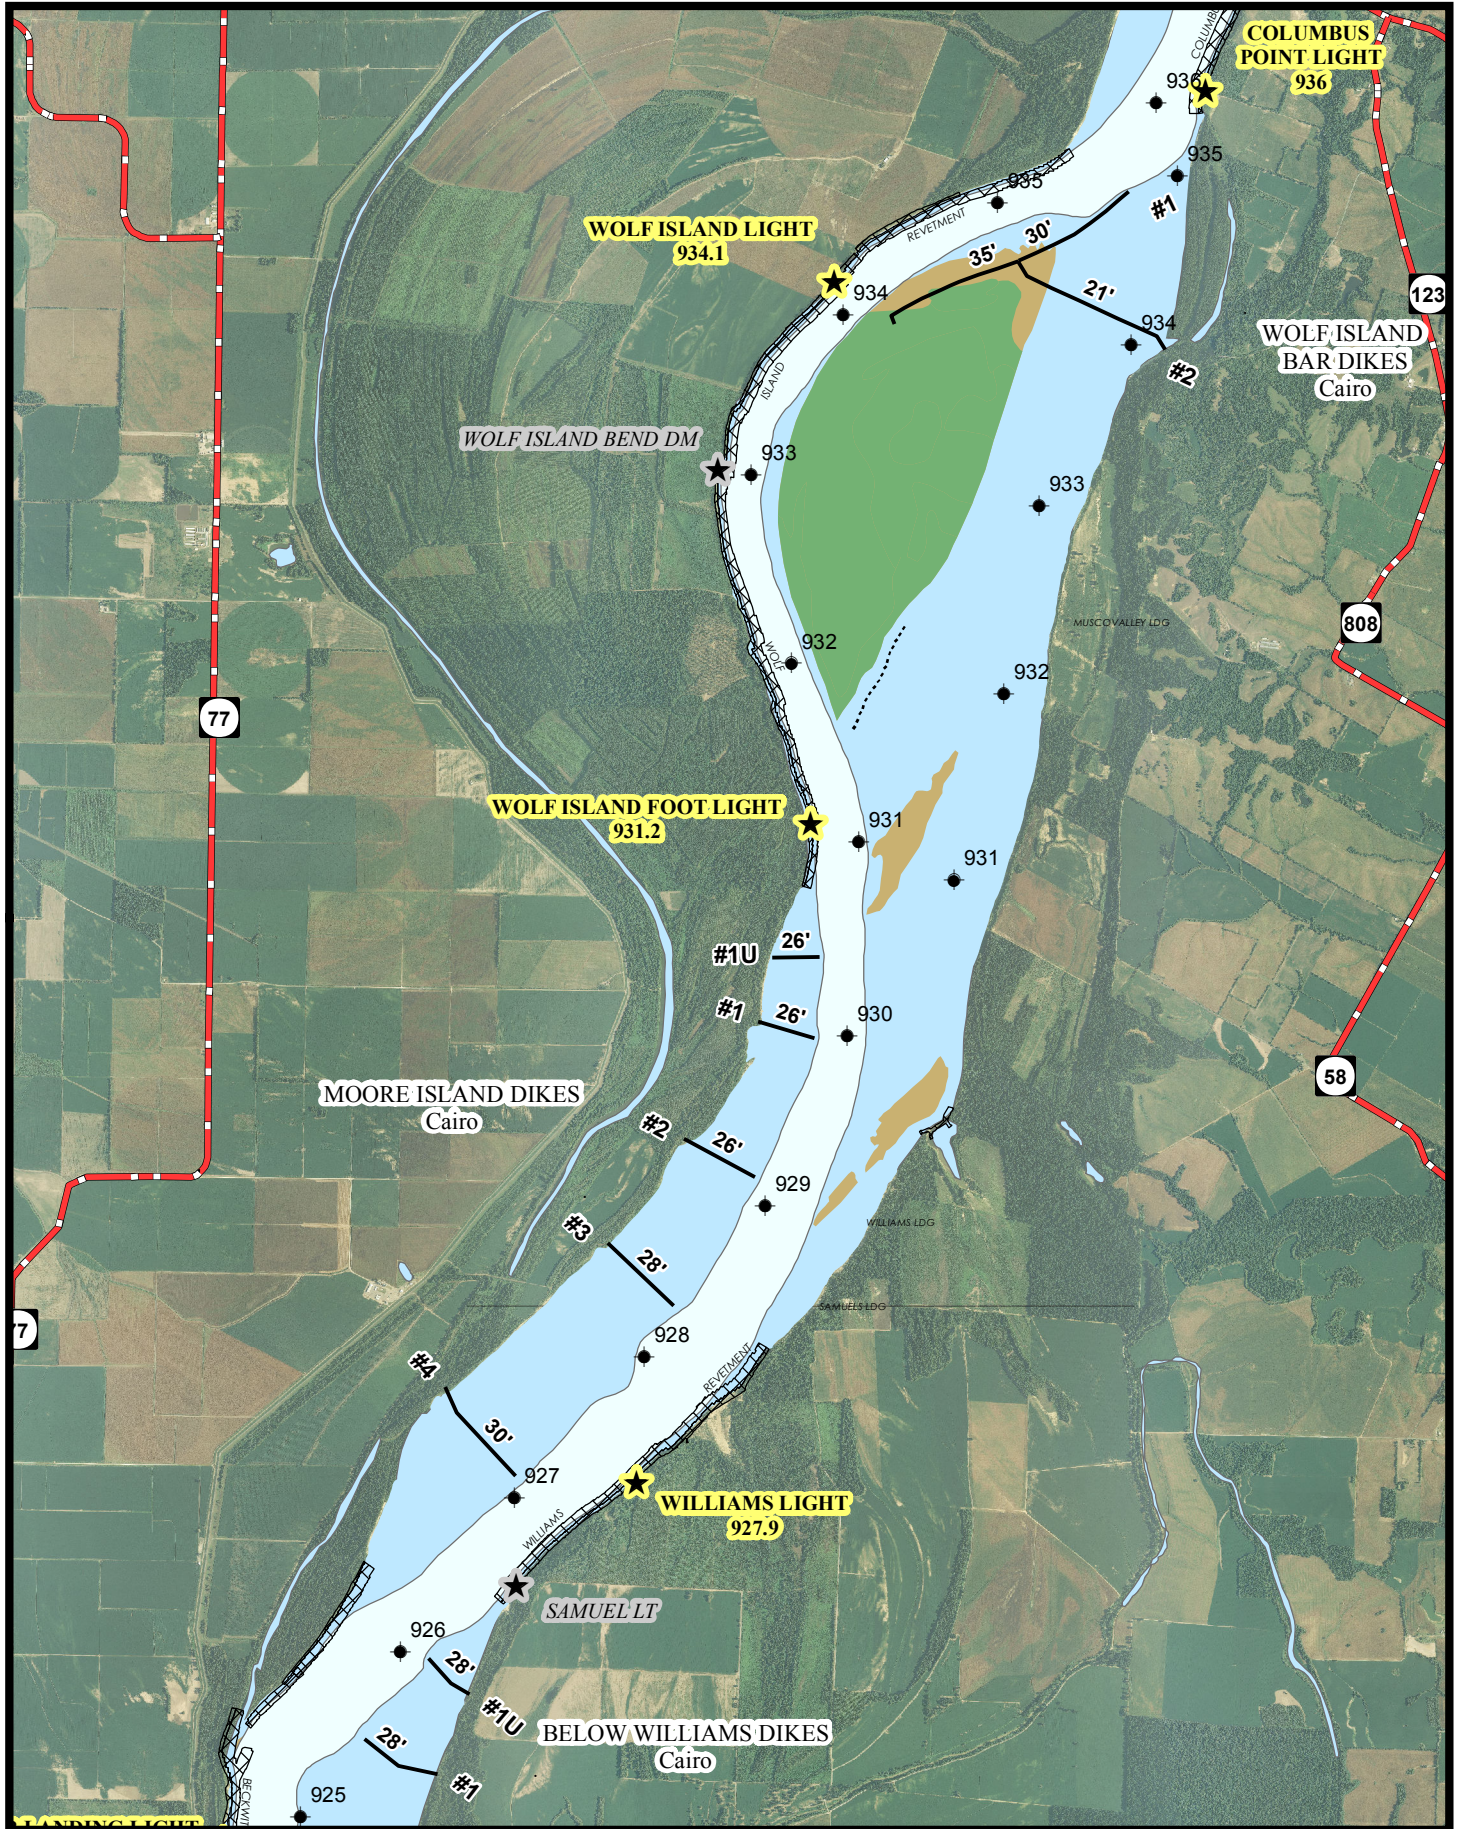

* Typical Navigation Channel

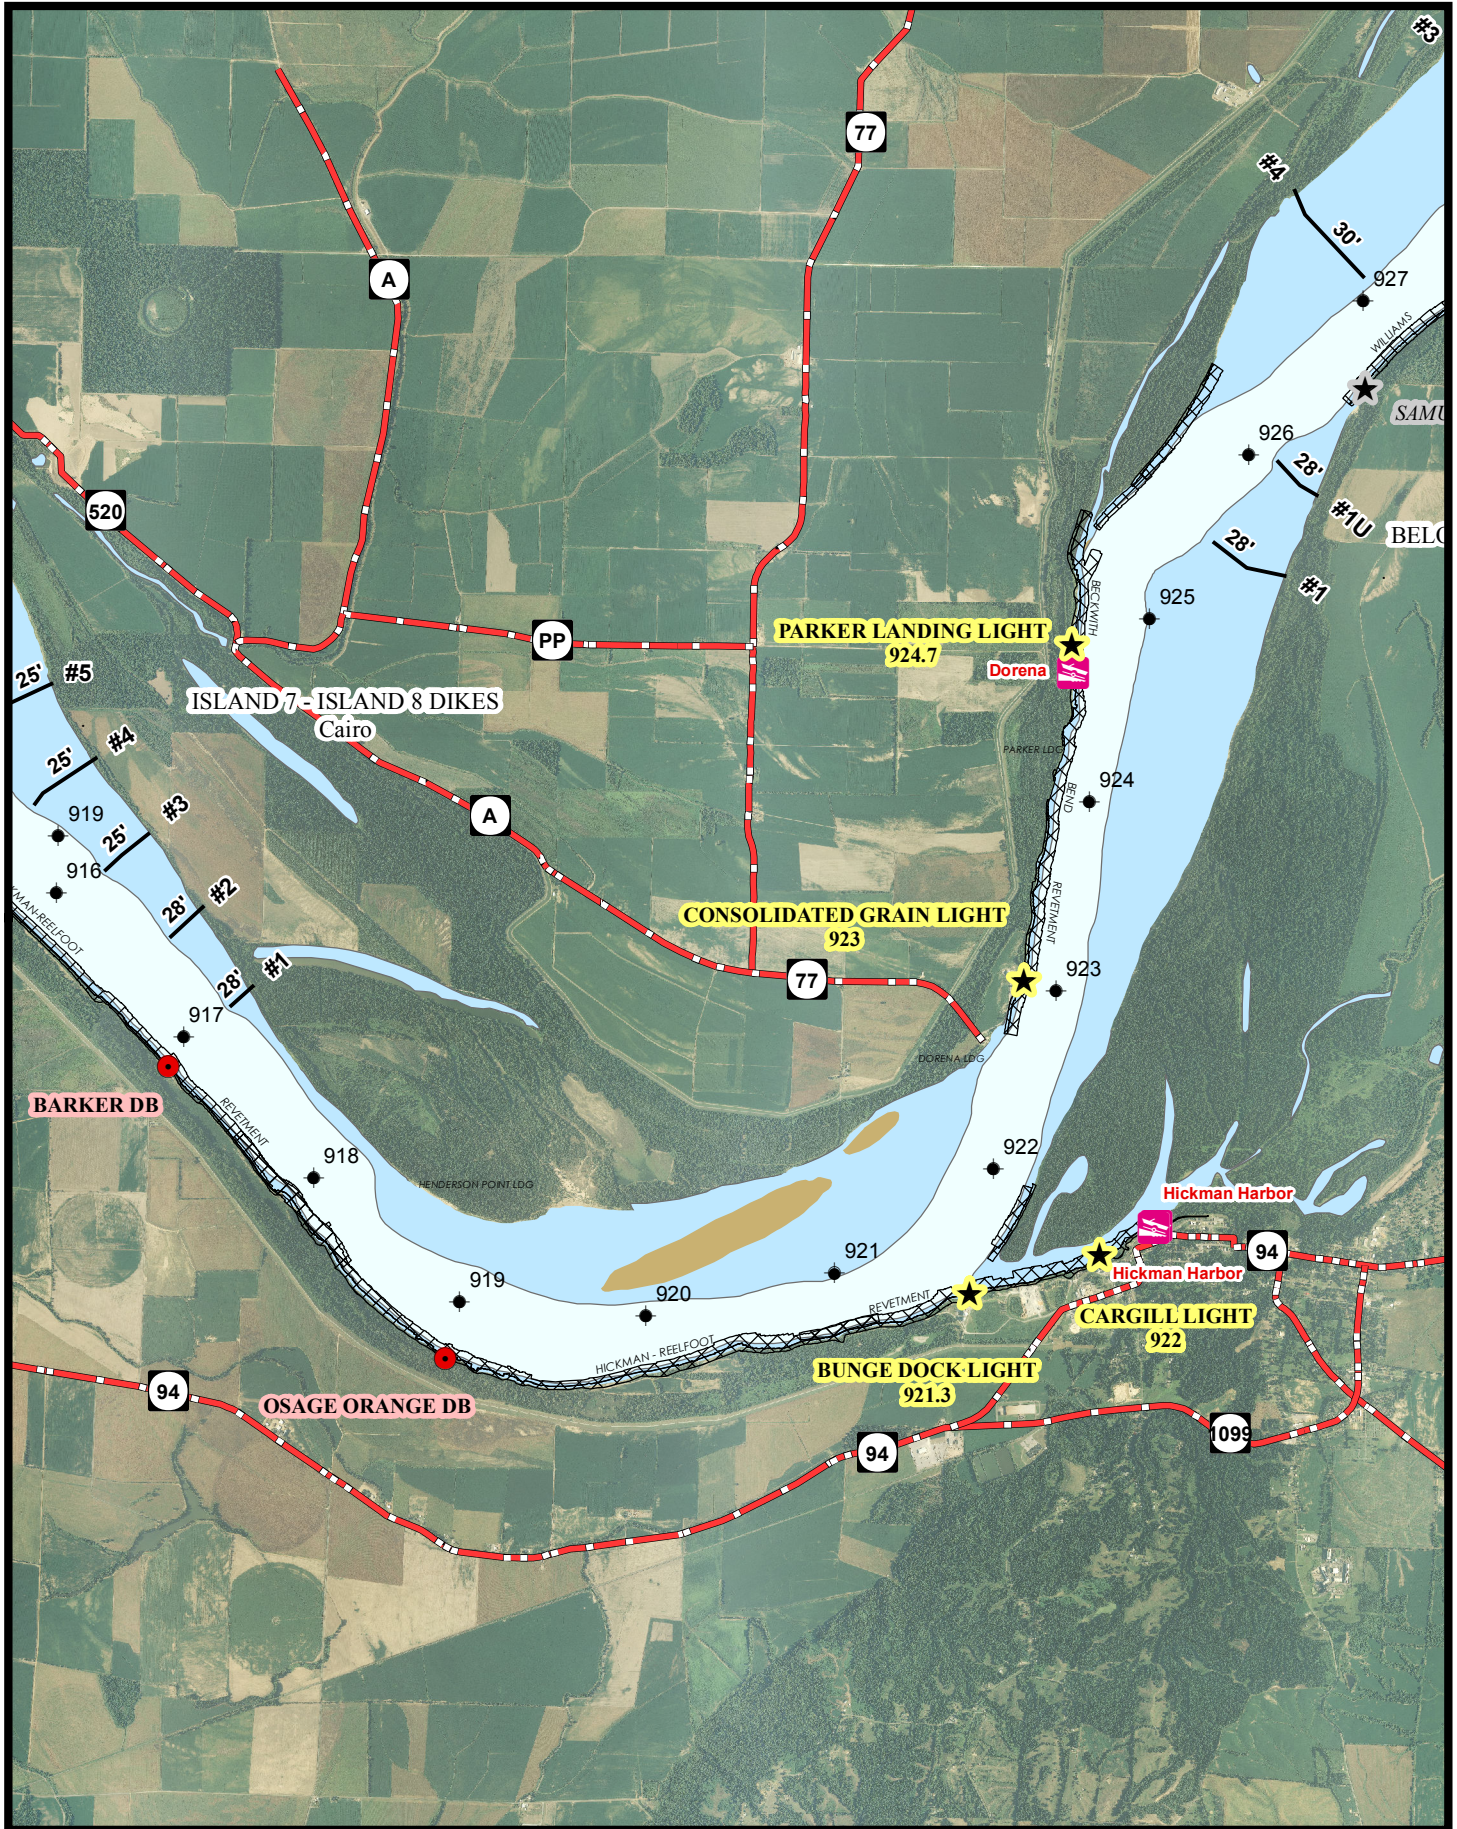

The light blue areas represents depths of project depth or greater.
Channel data as depicted was collected between August 2011-September 2011.
The navigation channel will be marked with Buoys as per U.S Coast Guard.

Aerial photos were flown September 2012.
