Joint Public Notice
U.S. Army Corps of Engineers
and
State of Arkansas

AUTHORITY: Pursuant to 33 CFR 325, as published in the Federal Register dated November 13, 1986, this notice announces an application submitted for a Department of the Army permit under Section 404 of the Clean Water Act.

APPLICANT:

Mr. Brax Broadus
Bunge North America
1701 Centerview Drive, Suite 314
Little Rock, Arkansas 72211
(501) 954-1500

PURPOSE: The purpose of this project is to dredge the area where barges are loaded and unloaded in order to keep the facility operational during low water conditions.

LOCATION: The project site is located on the right descending bank of the Mississippi River at approximate River Mile 727.3 in Crittenden County, Arkansas, at latitude 35.10183° and longitude -90.18171°. The dredged material will be discharged back into the Mississippi River. The project area (including the area to be dredged and the discharge area) is shown on the Fletcher Lake, TN, 7.5 minute quadrangle map (Attachment 1).

DESCRIPTION OF WORK: The applicant proposes to conduct maintenance dredging operations at an existing facility during low water conditions. The applicant proposes to dredge an area 70 feet wide and 500 feet long (Attachment 2). It is estimated that up to 6,500 cubic yards of material would be dredged in order to allow the facility to remain operational during low water conditions. The dredged material will be discharged back into the Mississippi River.

If authorized, maintenance dredging activities could occur within a ten-year time frame.

The applicant proposes to minimize impacts by distributing the discharge and not allowing it to build up in the Mississippi River.

WATER QUALITY CERTIFICATION: By copy of this public notice, the applicant is requesting water quality certification from the Arkansas Department of Environmental Quality that the activity will comply with applicable requirements set forth in 33 U.S.C. and 1341 (a)(1) of the Clean Water Act and all State laws and regulations promulgated pursuant thereto. This certification or evidence of the water quality certification or waiver of the right to certify must be submitted prior to the issuance of a Corps of Engineers permit. The Corps of Engineers' evaluation of the impact of the activity on the public interest will include application of the guidelines promulgated by the Administrator, EPA, under authority of Section 404(b) of the Clean Water Act.

ENDANGERED SPECIES: This notice is being coordinated with the USFWS. The Memphis District is aware of interior least tern nesting sites and avoids dredging in the vicinity of these sites during the nesting season. The pallid sturgeon, *Scaphirhynchus albus*, is known to utilize the Mississippi River. We have agreed to refrain from navigational dredging during the pallid sturgeon *Scaphirhynchus albus*, spawning season which occurs from April 1 to June 30, unless extreme low water conditions occur during this period. We will consult with USFWS on those occasions. Any comments USFWS may have regarding other endangered or threatened wildlife or plants, or their critical habitat, will be considered in our evaluation of the described work.

CULTURAL RESOURCES: The Memphis District will evaluate information provided by the State Historic Preservation Officer and the public in response to this public notice and we may conduct or require a survey of the project area.

FLOOD PLAIN: In accordance with 44 CFR Part 60 (Flood Plain Management and Use), participating communities are required to review all proposed development to determine if a flood plain development permit is required. Flood plain administrators should review the proposed public notice and notify this office of any flood plain development permit requirements.

PUBLIC INTEREST REVIEW: The purpose of this public notice is to advise all interested parties of the activities for which a permit is sought and to solicit comments and information necessary to evaluate the probable impact on the public interest.

The decision whether to issue a permit will be based on an evaluation of the probable impact including cumulative impacts of the activity on the public interest. That decision will reflect the national concern for both protection and utilization of important resources. The benefits which reasonably may be expected to accrue from the project must be balanced against its reasonably foreseeable detriments. All factors which may be relevant to the project will be considered, including the cumulative effects thereof; among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, floodplain values, land use, navigation, shoreline erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, considerations of property ownership and in general, the needs and welfare of the people.

The Corps of Engineers is soliciting comments from the public; Federal, state and local agencies and officials; Federally recognized Tribes; and other interested parties in order to consider and evaluate the impacts of this proposed activity. Any comments received will be considered by the Corps of Engineers to determine whether to issue, modify, condition or deny a permit for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects and the other public interest factors listed above. Comments are used in the preparation of an Environmental Assessment and/or an Environmental Impact Statement pursuant to the National Environmental Policy Act. Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

PUBLIC HEARING: Any person may request, in writing, within the comment period specified in this notice that a public hearing be held to consider this application. Requests for a public hearing shall state, with particularity, the reason for holding a public hearing. The District Engineer will determine if the issues raised are substantial and whether a hearing is needed for making a decision. If a public hearing is held, it will be for the purpose of obtaining additional information that we could not otherwise obtain through a public notice process; not to inform the public about the specific details of the project in greater detail than what is found in this notice. This is not a Corps project. We are not a proponent or are we an opponent of the project. We are merely the permitting authority of Section 404 and Section 10 permits required by our office.

COMMENTS OR REQUEST FOR ADDITIONAL INFORMATION: Send comments to the Corps of Engineers, Memphis District and Arkansas Department of Environmental Quality. Comments may be sent via mail or E-mail to the following:
