6 January 2025
Public Notices Module Now Available—Enhances RRS Functionality!

The U.S. Army Corps of Engineers (USACE) is excited to announce the launch of the Public Notice module on the Regulatory Request System (RRS). Released in January 2025, this new feature allows users nationwide to search, review, and comment on projects being reviewed by the Regulatory Program, significantly enhancing transparency, accessibility, and efficiency. The Public Notice module provides access to Regulatory projects requiring a standard permit or when public notices are issued to develop Mitigation Banks, In-lieu Fee Programs or to issue/reissue a Regional or Programmatic Permit or Section 404 Letter of Permission. It organizes notices by state and district, which can be viewed in a table format or on an interactive map. Users can easily search for notices by project name or address and submit comments directly through the platform, streamlining public engagement and reinforcing USACE's commitment to improving transparency and the permitting process.

The RRS is a web-based platform, currently in its beta version, designed to simplify the permitting process and enhance user experience. In addition to the new Public Notice Module, RRS enables users to submit permit applications, request jurisdictional determinations, and schedule pre-application meetings, all through a user-friendly interface.

We encourage you to explore the Regulatory Request System and its new features by visiting rrs.usace.army.mil. For additional information or to provide feedback, please contact us at rrs@usace.army.mil.
